

OUR MISSION

The mission of BioGenesis is to harness the nutritional and environmental benefits of Australian-grown Chlorella to improve health outcomes and promote sustainable agriculture practices.

OUR PRODUCTS ARE MADE OF PURE, NATURAL AUSTRALIAN-GROWN SUPERFOODS THAT ARE GOOD FOR YOUR HEALTH AND GOOD FOR THE PLANET.

Commitment to the Environment

We're committed to growing and harvesting our ingredients with as little impact on the environment as possible. All our products are free from herbicides, pesticides and environmental contaminants.

We also use sustainable farming practices and never test on animals, so you can be confident that our products are as good for the planet as they are for your health.

Innovation Backed by Science

We're leading the way in developing innovative new products that are nutritionally superior to what's currently on the market.

With science, health and nutrition underpinning our product development, we're excited to be expanding our range to include food and beverage products and skincare in the near future.

A team of experts

Our team is made up of experts in the fields of phycology (algae growing), horticulture and nutrition.

Founder, Colin McGregor, is one of Australia's most experienced algae growers, helping a number of Australian companies harness the benefits of algae on a commercial scale.

WE ARE HERE TO CREATE A POSITIVE IMPACT ON BOTH INDIVIDUAL HEALTH AND THE ENVIRONMENT.

BioGenesis exists to provide a sustainable, nutrient-rich food source that can help address nutritional deficiencies and support overall health. Our ultimate goal is to be at the forefront of sustainable agriculture practices, contributing to a healthier planet by reducing the carbon footprint associated with traditional farming and food production methods.

We utilise innovative, eco-friendly cultivation methods tailored to the Australian climate, ensuring that our Chlorella is of the highest purity and quality

THE ONLY "AUSTRALIAN MADE, AUSTRALIAN GROWN" LICENSED PRODUCER OF CHLORELLA.

We're proudly 100% Australian owned and operated. We take pride in our Aussie roots, operating in a country known for its unique biodiversity and stringent quality standards. From our farm in tropical Queensland, right through to packing and distribution, our products are grown and processed in Australia to the highest quality standard.

Australian-grown Chlorella benefits from the clean air, water, and abundant sunlight, contributing to its superior quality. Supporting BioGenesis means supporting local Australian agriculture, helping to sustain the local economy and job market.

Environment Setup

BioGenesis Chlorella is organically grown in the pristine Great Barrier Reef region of northern Australia. We begin by setting up controlled aquatic environments that mimic the optimal natural conditions for Chlorella growth, utilising Australia's abundant sunlight and clean water resources, where it will thrive in the fresh spring water ponds.

Growing

Our Chlorella thrives in these controlled conditions, benefiting from the natural sunlight and temperature variations, which are closely monitored to ensure ideal growth.

We have developed an innovative advanced energy efficient hydrodynamic growth system that replicates a natural river flow.

Harvesting

Once mature, the Chlorella is carefully harvested to preserve its nutritional integrity. Our cultivation process ensures that we consistently produce a high-quality product. When harvested we apply an advanced biodynamic technology to gently crack the hard outer cell wall making the nutrients fully available.
